Education

ABES Engineering College, Ghaziabad, UP (AKTU)	Aug 2023 – Jun 2027
B.Tech. in Computer Science & Engineering	CGPA: 8.29/10
Little Flower School, Gorakhpur, UP – ISC (XII): 92.8%, ICSE (X): 95.8%	Apr 2021 – Mar 2023

Technical Skills

Languages: Java, Python, SQL, JavaScript, C. Frontend: React, GSAP, HTML, CSS.
Backend: Spring Boot, Spring Security, Spring Data JPA, REST, JWT, Microservices, Swagger/OpenAPI.
Salesforce: Salesforce Development, Apex, SOQL, Triggers, Lightning Web Components (LWC), Flows.
Data: PostgreSQL, MySQL.
DevOps & Cloud: Docker, Docker Compose, Git.
Testing & QA: Postman, SQL Data Validation.
AI/ML: scikit-learn, NLP (TF-IDF), Pandas, Matplotlib. Core: DSA, OOPs, DBMS, Operating Systems, CN.

Work Experience

Controlled	Ghaziabad
Software Engineer Intern	Jun 2026 - Sep 2026
- Built the company’s production website reaching a Lighthouse score of 92 and 2.8s load time, by building reusable React/TypeScript components and optimizing GSAP animations. - Cut manual regression effort by 12 hrs/release across 25+ API endpoints and 15+ end-to-end scenarios (API + mobile) by building automated Postman collections and test scripts. - Surfaced 18 defects (5 critical) before release by writing SQL validation queries against PostgreSQL tables and relationships, and turning findings into defect reports for the dev team. - Debugged production issues with the dev team by tracing logs in Grafana and Dozzle, reducing time-to-diagnose by 35%.	

Projects

SpringSentinel API Gateway & Guardrail System GitHub	Apr 2026 – Present
- Sustained 85 req/s at p95 < 180 ms on posts, nested-comments, and virality-scoring REST APIs (Spring Boot 3, PostgreSQL, Spring Data JPA). - Achieved zero cap violations across 200 parallel requests by enforcing per-post, per-depth, and cooldown limits in atomic Redis Lua scripts, chosen over application-level locks to eliminate round-trip race conditions. - Secured the gateway with JWT + Spring Security and per-IP Redis rate limiting; reduced notification DB writes by 90% with a scheduled CRON batching sweeper. - Reduced setup to a single docker compose up with .env secret management, Swagger/OpenAPI docs.	
Business Connect Pro React, Node.js, PostgreSQL, WhatsApp Cloud API GitHub Live	Oct 2025 – Dec 2025
- Built and deployed a full-stack marketplace onboarding with structured profiles and service hosting. - Owned the service-lifecycle tracker (initiated → in progress → completed) with server-side status synchronization and real-time state updates, alongside a post-completion review & rating module. - Developed post-completion review and rating module to enhance marketplace transparency.	
SpamShield Spam Email Classifier GitHub	Dec 2024 – Feb 2025
- Classified spam at 96.4% precision / 94.8% recall (95.6% F1) on a 20,000-message dataset using TF-IDF features with Naive Bayes and Logistic Regression (scikit-learn). - Built the NLP pipeline (tokenization, stopwords, stemming); published in a peer-reviewed journal.	

Publications

Spam Email Detector: A Product Perspective for Enriched User Satisfaction R. Rastogi, Aditya Kumar Vaish , A.Modanwal . <i>Int. J. of Computational Engineering</i> , 2026. doi.org/10.1504/IJCE.2026.15552
--

Positions of Responsibility

Overall Coordinator Exora, GDG on Campus ABESEC
- Led a 30+ member team to deliver 5+ technical events reaching 200+ participants, growing attendance by 35%. - Built the event website with React/GSAP and owned end-to-end planning and coordination.

Achievements & Certificates

- HackerRank Certificates: Problem Solving, SQL - Java Spring Framework, Spring Boot, Spring AI (Gen AI) – Udemy. Certificate - Solved 300+ DSA problems on Leetcode
